Description: The Light Waves and Color Review includes 28 questions of varying type. Questions pertain to the wave properties of light - particularly polarization and two-point source interference. Principles of color addition and color subtraction are used to explain the world of color. The following concepts are emphasized: light as an electromagnetic wave, electromagnetic spectrum, visible light spectrum, polarization, interference, two-point source interference, Young's equation, Young's ...

Physics I Notes Chapter 14: Light, Reflection, and Color Characteristics of light • Light is an electromagnetic wave. As shown below, an electromagnetic wave is a transverse wave consisting of mutually perpendicular oscillating electric and magnetic fields. Electromagnetic waves are ultimately produced by an accelerating charge. A changing electric field produces a changing magnetic field ...
